Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

1. Claims 15-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 3/20/08.
2. Applicant's election without traverse of claims 1-14 in the reply filed on 3/20/08 is acknowledged.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 7-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "the particles" (cl 7, ln 7) lack antecedent basis in the claim.

Correction is required.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 2000-128577. JP 2000-128577 teaches all of the claimed limitations as evidenced by the English abstract.

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 2-3 and 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2000-128577. The above teachings of JP 2000-128577 are incorporated hereinafter. In regard to claim 2, such is well-known in the microparticle art. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to treat the microparticles of JP 2000-128577 with a suitable compound in order to efficiently impart hydrophobic properties. In regard to claim 3, such is well-known in order to achieve a desired characteristic. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made choose microparticles having the claimed aspect ratio in order to attain a desired characteristic. In regard to claim 5, the claimed liquids are well-known in the release agent art as solvents. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the claimed liquids in the release agent of JP 2000-128577 in order to safely carry the microparticles of JP 2000-128577. In regard to claim 6, such is well-known in the release agent art. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the release agent of JP 2000-128577 in an injection mold in order to facilitate the release of an injection molded article.
